Garage doors

INFINITY
PREMIUM
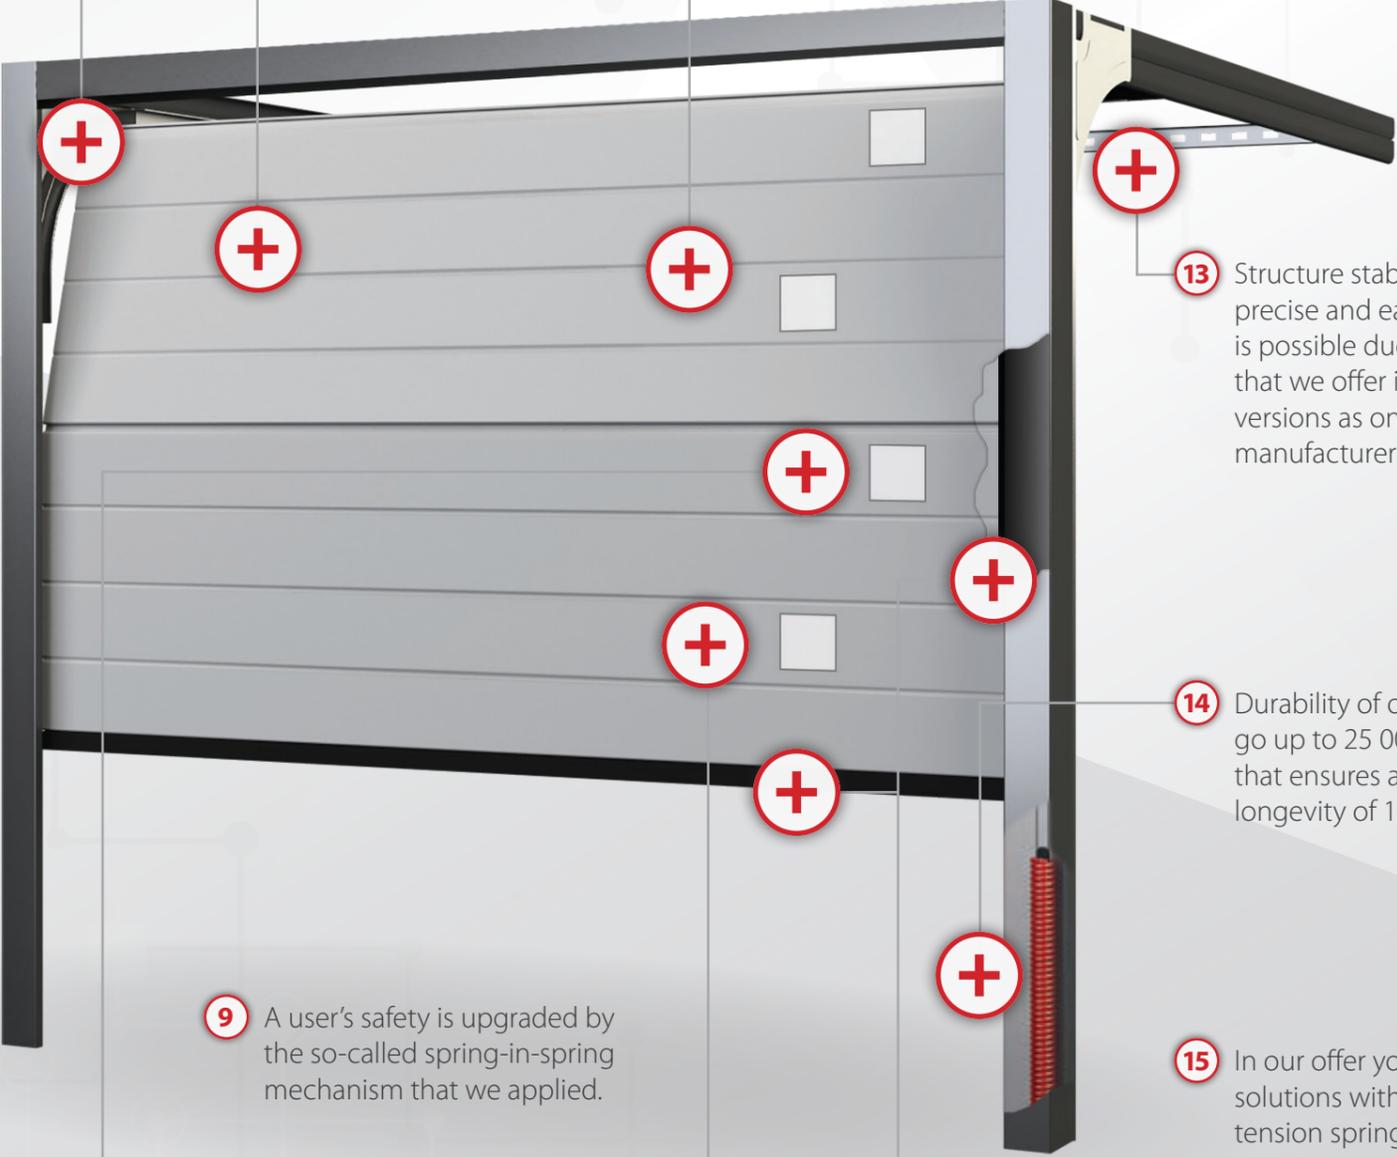

1 The highest quality slats from the best European supplier – Hoesch. They are equipped with a patented mechanism protecting agaist crushing fingers.

2 Two durable tracks made of 1,5 mm thick steel.

3 A Somfy motor enables its comfortable use. As the only manufacturer we provide two remote controls enclosed in all standard versions. Additionally, they can be upgraded to motors with a geolocation door opening option.

4 Simplified installation – fewer parts and preassembled elements. One person is enough to install a garage door.

5 The philosophy of two spanners – there are only two spanners needed to install the whole garage door (10 and 13).

6 A possibility to incorporate glass panels and any Inox design at a customer's special request.

7 An engine is equipped with an obstacle detection option and a four-step adjustment of the compression strength. After detecting any obstacle for instance a car entering the garage, the garage door will stop thereby causing no damage.

8 Extremely silent operation that is guaranteed by the high quality silent rubber rollers.

9 A user's safety is upgraded by the so-called spring-in-spring mechanism that we applied.

10 Garage doors in the standard versions are available in three colours: white, anthracite and silver. You may also choose between smooth and milled panels.

11 At a customer's special request we varnish and veneer the garage doors to match other doors and windows. This applies to smooth panels only.

12 Hinges with the upgraded durability.

13 Structure stability as well as precise and easy installation is possible due to a rear beam that we offer in our standard versions as one of few manufacturers.

14 Durability of our springs go up to 25 000 cycles that ensures a garage door longevity of 10 years.

15 In our offer you will find two solutions with torsion or tension springs.

16 Tightness of a garage door is guaranteed by thermal seals in frontal beams as well as a bottom seal with three support points.

INFINITY
COMFORT

To customers that value inexpensive solutions we recommend Infinity Comfort garage doors. What is the difference? Garage doors in a Comfort version do not include a rear beam that makes installation easier and thermal seals, which is replaced with sealing brushes. Infinity Comfort garage doors are only available in versions with torsion springs and this aspect is the only difference between the garage doors.
