

ENVIRONMENTAL POLICY

Occupying a significant position in the markets of window and door manufacturers, and of insulated glass, gates and roller shutter production, EKO-OKNA S.A. undertakes measures aimed at environmental protection, appropriate to the scale of the possible impact on the environment.

Our success is based on taking into account each factor arising relevant to our business, considering the decisions we make from the point of view of the recipients and users of our products, employees, suppliers and contractors and other parties related to our business.

As an inviolable foundation of our economic and market success, we deem the perfect execution of business and quality processes, and, at the same time, the fulfilment of all applicable compatibility requirements, to be directly and indirectly related to the reduction of negative environmental impacts.

Our environmental orientation is aimed at improving environmental results and is implemented through continuous improvement of the Environmental Management System, based on the requirements of PN-EN ISO 14001:2015.

The effective operation of the Environmental Management System enables us and our Customers to reduce the negative impact of our business on the environment in the scope and to the extent relevant to current technical and financial possibilities.

The above is achieved by:

- taking into account the environmental aspects of product life cycle at the stage of production and delivery,
- continuous improvement of competences, including the skills of the staff to take care of the environment,
- developing the environmental awareness of people working for us,
- informing and building awareness of environmental policies, goals and tasks, and adopted standards of conduct at all levels of management and workplaces,
- using state-of-the-art technical and organisational solutions related to the minimisation of the impact on the environment,
- analysing environmental impacts, their monitoring and controlling, as part of the implementation of environmental management programs.

The responsibility for co-implementation of this policy is appropriately distributed among all employees by assigning tasks and powers, as well as defining and communicating appropriate operational criteria.

By treating the Environmental Management System as an effective tool for the implementation of our policy, I hereby declare that conditions and resources will be provided, as well as support and personal involvement in its implementation and further maintenance, which should ensure the achievement of the goals.

Rev. I, Kornice, September 2017

President of the Management Board
EKO-OKNA S.A.
acting as **PRESIDENT OF THE MANAGEMENT BOARD**
Adam Rybak
